Dear Ms. Merritt and Mr. Turner:

Thank you for your letter of October 22, 2009 commenting on the draft 106 Programmatic Agreement (PA) for the Honolulu High-Capacity Transit Corridor Project (HHCTP). The FTA appreciates the participation of NTHP staff in the 106 process.

It is the purpose of NEPA to foster excellent environmental action and the process is intended to help us make decisions that are based on understanding of environmental consequences, and take actions that protect, restore, and enhance the environment. It is the intention of FTA to meet the requirements of NEPA, and we agree with NTHP that our NEPA document must meet these legal sufficiency requirements. To this end, FTA is currently reviewing the administrative Final Environmental Impact Statement and Section 4(f) Evaluation (AFEIS) for the HHCTP.

The avoidance of Section 4(f) resources is an important consideration in the designing and screening of alternatives. We expect that our analysis will be persuasive in demonstrating that the majority of public parks, recreational resources and historic resources identified within the study corridor were specifically avoided by the HHCTP, and that we are developing a transit project that causes the least overall harm to these resources.

In your letter, you accurately point out that under Section 106, FTA is responsible for determining “reasonably foreseeable indirect and cumulative effects.” FTA is attempting to meet this responsibility under NEPA by reviewing all planned and proposed development projects within or adjacent to the Area of Potential Effect (APE). We agree that it would be helpful to monitor historic property demolition in the APE and advise the PA conferees regarding the on-going condition of historic properties in the project area. We support such a stipulation in the PA.

However, we remain concerned that future changed land use conditions in the corridor may not be project related. Again we are tasked under NEPA with determining what impacts are related to the project and what impacts are reasonably foreseeable. There is a stipulation under discussion in the draft PA called Measures to Address Reasonably Foreseeable and Cumulative Effects Caused by the Project. We trust that through continuing negotiations, the stipulation in the final PA will effectively address NTHP

concerns about future demolitions and FTA's concerns that its 106 responsibilities are not open-ended.

With regard your concern about restricting future consultation to "concurring" parties: FTA and the participating parties have modified the draft 106 PA language so that it will not restrict the participation of any consulting parties. All participating parties will be able to review, comment, attend kick-off meetings and otherwise participate in all future 106 consultations.

During your recent visit to Hawaii we had a very productive conference call, and FTA believes that both we and Honolulu Department of Transportation Services addressed all of the major issues and specific comments contained in your letter.

Thank you again for your continuing participation in this process.
